Free-standing, crisis-driven statutes passed at different times and in different.(CNN) -- It's no secret that holding one's breath for long periods of time can be both mentally and physically taxing. Even more inadvisable than holding your breath for such lengths of time is doing so while sleeping. And yet a growing number of airlines and hotel businesses are catering to this nocturnal fad. The most common type of sleep apnea is known as obstructive sleep apnea. This occurs when the throat muscles relax and block the airway, causing oxygen to stop getting to the brain. While the

condition can be caused by obesity or cigarette smoking, the condition is usually exacerbated by a large neck size, in which case the throat can become "collapsed," causing additional problems. Habits that cause snoring include sleeping with your head and neck bent or stretched forward or backward and sleeping on your back rather than on your side. Causes that exacerbate obstructive sleep apnea include alcohol consumption, large neck size, heavy or loose neck muscles and repeated throat clearing while sleeping. Other conditions, such as heart disease and nasal congestion, often trigger sleep apnea. Sleep apnea is treated with surgery if necessary, a weight loss program and a change of habits. Is there any option for those who don't want to take these drastic measures? Enter in-flight snoring devices. The snore-free masks, made of medical-grade silicone, are worn on the face during flight to create a sense of sleep apnea, according to the manufacturers. Although some seats are equipped

with the devices, the masks are sold by the manufacturer to travel agencies, who then place them in seats where travelers would typically receive in-flight entertainment. Since their introduction, about 30 to 40 percent of users report feeling comfortable sleeping on the mask. Prices range from \$80 to \$99. In 2012, the Federal Aviation Administration started inspecting seatback entertainment systems for
